

CASE STUDY

AuraWell PEMF Treatment for Varicose Veins: A Path to Improved Function and Appearance

Challenge

Sarah, a 47-year-old, active woman has been dealing with varicose veins for the past eight years. As a former cosmetologist, Sarah spent significant hours standing, which exacerbated her symptoms. She experienced throbbing and achiness in her right calf and popliteal area, particularly during prolonged periods of standing. Unsightly "spider web" formations were visible above her knee, along with raised areas behind her knee.

Sarah sought a solution to alleviate the discomfort and improve the appearance of her varicose veins. Traditional treatments offered temporary relief, but she was looking for a more effective and long-term solution.

Solution

AuraWell PEMF therapy was chosen as an alternative treatment for Sarah's varicose veins. The NOVA HD device with the butterfly coil attachment was utilized for the treatments. PEMF sessions were conducted daily for one month, with a total of nine treatments. The settings were adjusted to an intensity of 8.5 for 15 minutes per session.

Get AuraWell Today. Experience the transformative benefits of AuraWell PEMF. Start your journey to a faster recovery by acquiring AuraWell today. Regain full functionality with this innovative technology.

Results

Within three consecutive days of treatments, Sarah experienced a remarkable improvement. The throbbing and achiness in her calf and popliteal area vanished, even during standing and exercising. Visually, the discoloration centralized, and the bulging areas faded. Sarah noticed that she could engage in longer periods of exercise without experiencing discomfort.

After three weeks of treatments, Sarah continued to witness positive changes. Discoloration reduced further, and the coloring of the affected areas improved. Although scheduling conflicts prevented her from daily treatments, she remained free of pain and achiness, although some mild discoloration returned.

Varicose veins have physical, mental, and emotional implications, and PEMF therapy offers promise by improving blood flow and reducing inflammation. Further research is needed to validate its effectiveness with larger sample sizes, but the potential for PEMF therapy as a safe and effective option is clear, highlighting the need for long-term progress maintenance.

Within the first few months of working with Aura,
we were able to:

Decrease Pain

Provide a seamless
experience to our clients
