

CASE STUDY

Accelerating Recovery from Lateral Epicondylitis with AuraWell PEMF

Challenge

Lateral Epicondylitis, commonly known as Tennis Elbow, poses significant challenges for clients and clinicians. A 48-year-old male experienced substantial relief and restored functionality after just five visits using NOVA HD High-Frequency PEMF therapy. He sought relief from debilitating pain and limited mobility caused by Tennis Elbow. The objective was to alleviate pain, reduce inflammation, and restore full function to the affected arm.

Solution

He underwent a personalized treatment protocol utilizing NOVA HD PEMF therapy by AuraWell. This therapy stimulates cellular metabolism, improves blood circulation, promotes tissue regeneration, and enhances the immune system response. It aimed to accelerate the healing process and restore optimal activity levels.

Get AuraWell Today. Experience the transformative benefits of AuraWell PEMF. Start your journey to a faster recovery by acquiring AuraWell today. Regain full functionality with this innovative technology.

Results

After five visits, the client experienced remarkable improvement. The intense pain, initially rated at 7/10, subsided to 0/10 at rest and 3/10 during activities. Swelling and tightness significantly diminished, with tenderness reduced by 50%.

Manual muscle testing revealed substantial improvement, from 4-/5 to 4+/5 with wrist extensors. Full range of motion in the elbow and wrist was restored, enabling the client to resume daily activities without pain.

EMF therapy's instant stimulation of muscles, connective tissues, tendons, and cartilage promoted healing and a return to higher activity levels. Lost functions were regained, marking a turning point in a pain-free journey.

Within the first few months of working with Aura,
we were able to:

Decrease Pain

Provide a seamless
experience to our clients
